

USB 2.0 Cable

USB 2.0 Cable is a standard USB cable that provides a connection between a computer and a peripheral device. It is used to transfer data and power between the two devices. The cable is typically black and has a standard USB Type-A connector on one end and a custom plastic housing with a sliding switch on the other end. The sliding switch is used to control the power flow between the computer and the peripheral device. The cable is compatible with most USB 2.0 devices and can be used to connect a wide range of peripherals, including keyboards, mice, and external drives.

ISO9001-2016 is a standard for quality management systems. It is used to ensure that organizations are providing products and services that meet the needs of their customers. The standard is based on the principles of customer focus, leadership, the plan-do-check-act cycle, and continual improvement. Organizations that are certified to ISO9001-2016 are required to maintain a quality management system that meets the requirements of the standard. This includes documenting processes, monitoring and measuring performance, and taking corrective action when necessary. ISO9001-2016 certification is a mark of quality and can help organizations to improve their efficiency and reduce costs.
